

Sports Website

Description

This website is for fans of hockey who would like to see stats of their favourite players and talk to others about their favourite players. These websites inspired mine:

- <https://hockey.fantasysports.yahoo.com/hockey>
- <https://frozenpool.dobbersports.com/>

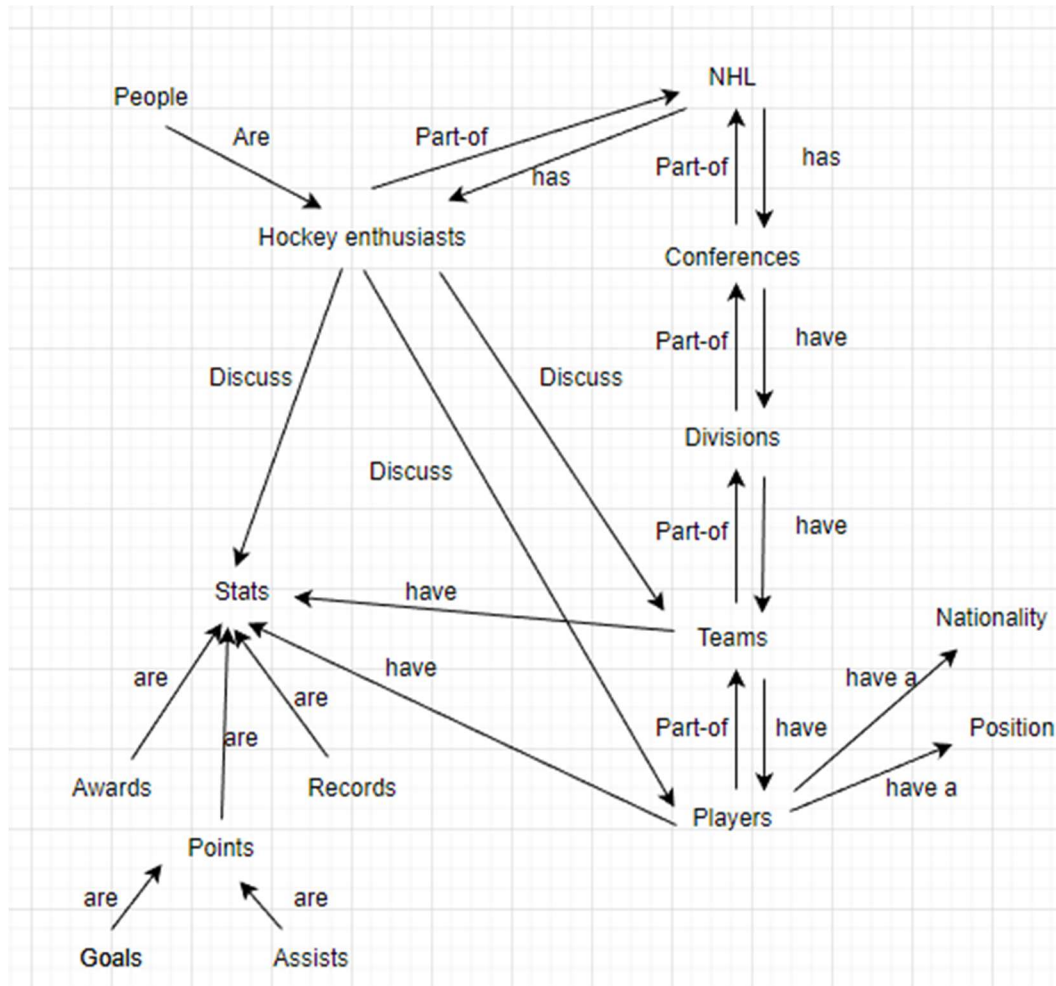

Persona

John would like to be able to see and compare stats of his favourite hockey players to each other and would like to be able to discuss them with other people as well.

John's semantic network includes these entities:

- Hockey enthusiasts
- NHL
- Teams
- Players
- Stats
- Conferences
- Divisions
- Records
- Awards
- People
- Position
- Nationality

Semantic Network

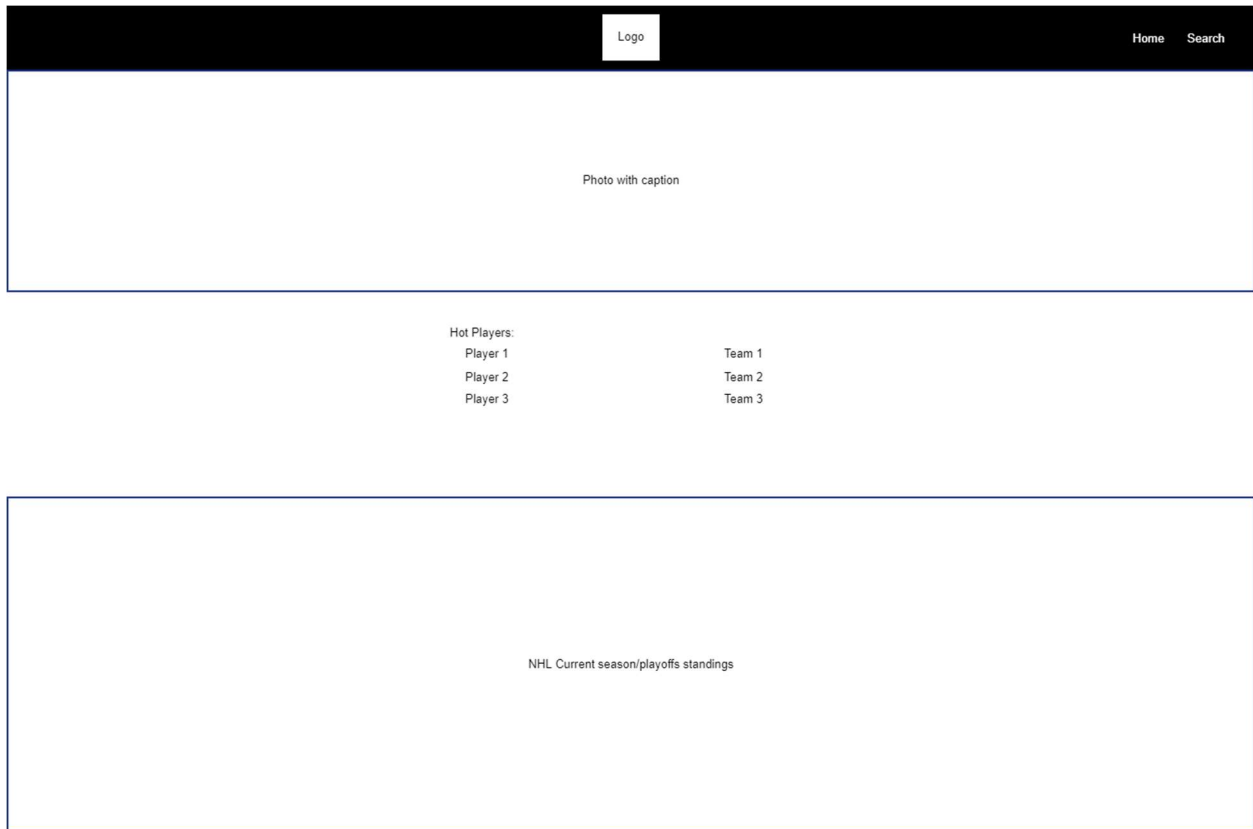

Prototype

Interactive Processes

- Divergent/convergent exploration:** Users will be able to use a faceted search for players/team stats.
- Analyse results:** Users will be able to see players/team stats and compare them.
- Communication:** Users will be able to communicate with each other about players.

Storyboard

This is the home page. The user can navigate to the search page by clicking on the search button in the navbar.

Chat

This is the players page. The user can see the players stats on this page. The user can then click on chat to have a chat popup to communicate with other users or can click compare to be taken back to the search page to search or another player. After clicking on the new player searched for the user will be taken to the compare page.

This is the compare page. The user can see both players stats here. The player with the higher total for each category will have their number in green and the player with the lower total will have it in red. If there's a tie the colour will stay black.
